INNOVATION CHALLENGE

Be an Innovator … Take the Challenge

We are looking for **ideas and innovative solutions** to enable people to have an immersive, virtual, experience of air traffic control. This virtual experience will advance the understanding of the environment, physical conditions, ops tempo and technology experienced in air traffic control.

Your solution can be anything that helps people get the feel for what it's like to experience air traffic control. The proposed solutions to this innovation challenge should be fairly easy to implement and yield positive user experiences.
